Summary

Results-driven Computer Science and Engineering student with strong expertise in data analytics, business intelligence, machine learning, and AI-powered solutions. Proficient in building end-to-end analytics pipelines, developing interactive Power BI dashboards, and applying Python-based statistical modeling and NLP techniques to extract actionable business insights.

Experienced in leveraging ML algorithms for predictive analytics and AI-driven approaches such as sentiment analysis and pattern recognition to solve real-world problems.

Passionate about transforming raw, complex datasets into intelligent, data-driven narratives that empower strategic decision-making across business functions.

Experience

Data Analyst Intern

Dabotics India

June 2025 – Aug 2025

Data Analyst Intern

Internshala

June 2024 – Aug 2024

Projects

Marketing Analytics Pipeline – End-to-End BI Solution

- **ETL & Pipeline:** Designed SQL-based ETL processes to extract and transform marketing data, ensuring pipeline reliability and data integrity from source to dashboard.
- **NLP Sentiment Analysis:** Applied Python (NLTK) to perform sentiment classification on customer feedback, correlating sentiment scores with campaign conversion rates.
- **Power BI Dashboard:** Delivered a 4-page executive Power BI dashboard covering conversions, engagement, and campaign ROI, starting from a formal BRD.

Sleep Disorder Analysis Dashboard – Power BI & EDA

- **Disorder Pattern Analysis:** Built an interactive Power BI dashboard analyzing Insomnia and Sleep Apnea across demographic and lifestyle variables with drill-through filtering.
- **Statistical Correlation:** Identified significant correlations between stress levels, BMI categories, and sleep quality using EDA and visual storytelling.
- **ML-Driven Insights:** Applied predictive modeling techniques to classify sleep disorder risk levels based on lifestyle features and health metrics.

DMart Stock Market Analysis – Python EDA & Visualization

- **Exploratory Data Analysis:** Conducted comprehensive EDA on DMart historical stock data, uncovering price trends, volatility patterns, and volume anomalies.
- **Data Visualization:** Produced publication-quality visualizations of moving averages and market performance indicators using Matplotlib and Seaborn.
- **AI-Assisted Forecasting:** Leveraged NumPy-based statistical techniques to model short-term price momentum and identify trading signals.

Skills

Data Analytics & BI

- Power BI, DAX, KPI Development
- Dashboard Design & Data Modeling

Programming Languages

- Python, SQL
- Pandas, NumPy, Matplotlib, Seaborn

Machine Learning & AI

- Predictive Analytics, EDA
- NLP & Sentiment Analysis (NLTK)
- Pattern Recognition, Classification

Data Engineering

- ETL Pipeline Design
- Data Cleaning & Wrangling
- Business Requirements Documentation

Tools & Platforms

- Jupyter Notebook, Git/GitHub
- Advanced Excel, VS Code

Education

Bachelor of Technology (B.Tech)

Computer Science Engineering

Year : 2022-2026

Dr. A.P.J. Abdul Kalam Institute of Technology

Senior Secondary (Class 12)

Year : 2022

Dr. LBVM Inter College Khetikhan, Champawat

Secondary (Class 10)

Year : 2020

Dr. LBVM Inter College Khetikhan, Champawat

Achievements

Smart India Hackathon (SIH) – Internal College Hackathon Participant.
